(57) **ABSTRACT**

Mechanisms are provided for determining contact-related information items for presentation to a user, such that the user can refer to the information items to enhance the user's communication with the contact. Contact-related information items that have a high relevance level may be accessed and presented to the user. In a case in which no or limited high relevance level information items exist, contact-related information items associated with incrementally lower levels of relevance may be accessed and presented. Moreover, according to some example embodiments, relevance may be derived based on the relationship of the user with the particular contact and/or the frequency of communications with the contact.
